Dr ELJADDI Tarik is PostDoc at Position at Polymers, Biopolymers, Surface laboratory with Pr. S. Marais in Rouen, France. He is working on the development a new mixed matrix membrane used in gas separation.

From 2016 to 2017, he was PostDoc at Reactions and Chemical Engineering Laboratory in Nancy, France, He worked with Dr D. ROIZARD and Pr. E. FAVRE on Membrane distillation project for developing a new membrane to produce freshwater from seawater.

Dr ELJADDI holds a PhD in Physical chemistry and membranes processes from Hassan II university in Morocco. He worked on facilitated transport of metal ions in liquid membrane.

Dr ELJADDI is on the board of African membrane society, and member in European membrane society, and European desalination society and international membrane society.

He has author and co-author over than 20 papers and participates in several conferences by 50 communications (oral and poster). His career is marked by several scholarships and prizes from different organization like EMS (Europe), CNRST(Morocco), AUF (International), AMS(Africa), MEDRC (Sultanate Oman).
